

# Equipment

Students have access to computers throughout the School and network access for their laptops. On arrival, each student is provided with a personal disk space, and esc-lille email address, and study rooms connected to the network.

The School has cabled television circuits, videoconference equipment, wifi, amphitheatres, and cabled classrooms. Access to the Internet is free and unlimited. Students can also use all the Information and Communication Technologies (ICT) that have been designed to facilitate distance learning by providing access to virtual pedagogical resources and supporting the monitoring and follow-up of students (such as Claroline, the ESC Lille Course Management System, the ISGI Intranet, the on-line Media Library, the Career Services Intranet, the Alumni Association Internet, the web-based collaboration solution WebOffice and Groove Virtual Office).

The ESC Lille media centre is open every day and on Saturday mornings. It offers a remote access to most of its resources. The media centre team runs training sessions in new technologies and new media so that every student acquires a good level of information management skills.

ESC Lille has also teamed up with European leader in e-learning solutions Crossknowledge to provide students with a selection of online remote distance learning courses in business and management fundamentals. More than 300 multimedia modules are offered. They are 30 minutes in length and can be taken in either English or French. All of the modules include a built-in evaluation system that allows for measurement of student progress. Among the many courses on offer are: Personal Development, Marketing, Finance, Human Resources, Supply Chain, and Project Management.
